

I am a highly motivated individual with a passion for learning and problem-solving. I thrive on challenges and enjoy stepping outside of my comfort zone to develop new skills.

My fascination with computers and technology started at a young age and led me to study software design and development in high school, where I gained experience in basic programming, HTML, and CSS. Furthering my education at Enmore Tafe, I designed simple static websites to build my skills. These experiences provided a solid foundation for the passion for software development I still have to this day.
